

Round Slings IRS

Product information

Polyester round slings are economical, lightweight, flexible and easy to store. The down side to these slings is they do wear and cut much easier than wire rope and chain; however the use of wear pads and other protective products really helps extend the life of synthetic slings and allows them to be used in many applications where cutting and wear might be an issue. Synthetic slings are used in almost every industry in which chain and wire rope are used, but they are also often used in areas where you do not want to damage or mark finished products as wire rope and chain will. One example would be the marine industry where marine slings have been developed to lift boats out of the water without damaging them.

Features:

- Lightweight and easy to handle
- Highly flexible for better load conformity
- Easy to transport and store
- Cost-effective lifting solution
- Gentle on finished or delicate surfaces
- Suitable for a wide range of industrial applications

OTHER SIZES AVAILABLE UPON REQUEST.
